

S2 – More FFMPeg

You already know about FFMpeg. Let's start and do some exercises!

Do the exercises and upload them inside a PDF with screenshots

And of course, the scripts should go into your Github. Create a new repo called S2 and put the link inside the PDF

1.-) Cut 10 seconds of the BBB video

2.-) Extract the YUV histogram from the previous BBB video you've done and create a new video with both images at the same time

3.-) Resize the BBB video into 4 different video outputs (doesn't need to be at the same time):

- 720p**

- 480p**

- 360x240**

- 160x120**

4.-) Change the audio into mono output and in a different audio codec

5.-) Integrate the exercises you've done inside a Python script, or do a Python script able to launch any of the other exercises. Feel free to create whatever you want!

Thanks
